

## VISION

Provide ease of use when managing the reservations for classrooms and lockers by centralizing these requests in one single application. By giving the opportunity of easy access to this kind of operations will allow students to be more productive with the kind of events that rely on this type of process.

## TARGET GROUP

The main objective of the project is to provide all active students in EAFIT a lighter and enjoyable experience when managing their college's private resources.

## NEEDS

- Students need to be able to make reservations easily with just the tap of buttons on an app.
- There is needed control for avoiding possible abuse of goods that is currently present.
- Automatization in the majority of the aspects of the process is needed to ensure availability.

## PRODUCT

Summarized, the product is an application (accessed via Web on Desktop and Mobile devices) which allow students to log in with their institutional email address, ensuring specific management of their college resources.

Its main features include:

- Sections for reserving classrooms and lockers.
- Clear and easy-to-understand graphs for available and already reserved classrooms and lockers.
- Customized reservation schedules for classrooms; limited reservations and hours per student to ensure fairness.
- Variety of options to choose when reserving lockers, with free and paid options to ensure the locker model is affordable for both parties.

## BUSINESS GOALS

Having better management tools and a controlled environment can provide better solutions for students, resulting in more interest by them in experiencing more products and services, increasing rentability.
